

WATER

Courtney Bursich
LIVE. NOURISHED.

You've heard the importance of "staying hydrated," but what if it wasn't just that simple? We are after all 60% water and if left without this lifegiving resource for any length of time our ability to sustain life would be impossible. So, if our bodies so desperately need water to sustain all of our life processes why shouldn't we be concerned with the quality of the water we are putting into our bodies? Here is where we need to be specific on determining WHAT constitutes pure water. Below I have listed the top 8 water contaminants commonly found in city water supply.

- 1 Chlorine**- Added to control microbes and bacteria. When combined with organic compounds the byproduct of Trihalomethanes are produced and are considered highly carcinogenic and cell damaging to the body.
- 2 Chloramines**- Added as a disinfectant and when combined with chlorine and other natural occurring material in water creates harmful disinfection byproducts (DBP's) and has been shown to cause cancer.
- 3 Lead**- Caused by aging pipes and infrastructure, lead poisoning has been linked to a number of health concerns such as blood disorders, and damage to the brain and kidneys.
- 4 Mercury**- Can cause kidney damage and often found in city water as a byproduct of runoff from refineries and factories.
- 5 VOC's**- Volatile Organic Compounds contain carbon and are known endocrine disruptors. These can affect healthy hormone production and regulation in the body.
- 6 Herbicides**- Trace amounts have been detected in our water supply due to the overuse of chemicals in our farming practices.
- 7 Pharmaceuticals**- Synthetic chemicals in prescription drugs that have been detected in our water supply because of poor waste management.
- 8 Pesticides**- Often find their way to our water due to runoff from sewers and wastewater, highly toxic to the body.

BEST OPTIONS FOR SOURCING THE PUREST WATER

Now that we know all about the potential dangers of our water, let's discuss the best options for sourcing the purest water in our homes. Water is a huge miss for most people as we often think that what is provided in our homes is suitable to our health. This misnomer has led to many questions in the health arena and much confusion to the average person. This is no longer a question of how contaminated our water supply is, rather, how we plan on managing the effects our modern lifestyle has created on it. I have listed below the two water systems that I feel provide the most superior water quality. I have both of these systems installed in my home and can say from personal experience that the quality of the product and customer service from Radiant Life are excellent.

1. Whole house filtration system

Series 2, 4, or 6 depending on your home size and water usage needs.

2. 14 point under mount kitchen sink purification system

As a note, these systems can be installed without a plumber, however, unless you are really savvy with plumbing I would advise the use of a plumber for the initial install. They will be plumbed into your homes water system. These systems are effective at removing all the major water contaminants as well as the endocrine disrupting VOC's and pharmaceutical residue.

RADIANT LIFE 14 POINT PURIFICATION SYSTEM

Radiant Life Company offers the best water purifying system for drinking water on the market today. Fluoride, lead, chlorine, MTBE, chromium-6, nitrates, pesticides, pharmaceutical residues, water-borne illness—you name it: this is the only system that can completely take out whatever your water throws at it!

The unique 14-Stage Water Purification System incorporates three purifiers (reverse osmosis and two deionization purifying stages) as the foundation of the system. This ensures 99.99% purification when new, only falling to 99.9% over time. Almost all other reverse osmosis-based systems use just one purifier and thus may start at 95% purification, but after a year that figure will often be as low as 80%. This is just one of the things that water dealers won't tell you.

Our pre- and post-filters offer additional filtration and we also include a UV light system enclosed in a compact stainless steel chamber for added protection against bacteria and pathogens. These first seven stages are designed to remove all toxins in your water.

Creating Biocompatible (healthy, hydrating) water is completed in the second seven stages of this system. The water is balanced, restructured, and remineralized mimicking the best waters in nature.

RADIANT LIFE SERIES 2,4 OR 6 WHOLE HOUSE FILTRATION SYSTEM

Our Series 4 System is for individuals on municipal water who are seeking to remove a wide variety of possible contaminants including chlorine, chloramines, fluoride and heavy metals. The Series 4 is also designed to take out trihalomethanes, haloacetic acids, volatile organic compounds (VOCs) including industrial solvents, herbicides, and pesticides, in addition to heavy metals and fluoride before they enter your home's plumbing. This is all done while retaining essential minerals that are naturally present in your water supply.

To our knowledge, the Series 4 is the only system on the market that removes chlorine, chloramines, fluoride, heavy metals and other contaminants from your water in one convenient tank.

The Series 4 Whole House Water Filtration System is a Point-of-Entry (POE) system installed wherever the main water supply enters your home, possibly in your garage, basement or water closet. As such, it filters ALL the water in your home, including water used for kitchen and bathroom sinks, showering, bathing, laundry, dishwasher and toilets. Thus, it is a great solution for families who want to know that they have clean, safe water throughout their home without resorting to installing individual filters at each location.
